

Affordable and So Much More

KUIP is one of the largest producers of CCA-treated poles in the country. The preservative has been formulated to protect poles from becoming a food substance for termites and fungi while keeping the wood clean, odorless, non-staining, and safe to handle when used as recommended.

Key Features

Low Maintenance - DuraPine[®] CCA is a fixed preservative which means there is virtually no migration of chemical. As poles age in the field, remedial treatment at the groundline is unnecessary which saves both time and money.

Superior Strength - Full-scale testing has shown DuraPine CCA treatment does not impact the bending strength of poles, and, depending upon the wood species used, may even increase pole strength.

Low Conductivity - The DuraPine preservative used in our CCA poles is an oxide, so no salt by-products can impact pole conductivity. The low conductivity of dry CCA poles provides linemen additional protection from potential current leakage.

Long Life - DuraPine CCA treated poles are backed by a 50-year warranty against damage from termites and fungal decay.
