DuraPine Penta

treatments

The Lineman's Choice

Ask most linemen and they'll claim that penta-treated poles are the most flexible and easiest to climb. Our DuraPine® Penta poles are no different. When the need arises, linemen can quickly attach gaffs and climb without delay. A favorite for over 60 years, few treatments can match penta's strong combination of performance, durability and safety.

Key Features

Excellent in Cold Weather - When climate conditions are cold the oil-borne nature of our DuraPine Penta treatment makes poles far less susceptible to effects of freezing temperature, including brittleness, checking, pole twist or breakage.

Chemicals Stay in Place - The low vapor pressure and high absorption quality of our DuraPine Penta treated poles ensures over time that most of the chemical stays in the wood.

Non-Corrosive - DuraPine Penta treated poles are not corrosive to pole hardware.

Fire Resistance - Our DuraPine Penta treated poles display only minimal damage when exposed to grass or brush fire, and in many instances the poles self-extinguish after a fire.

Good Looking - The more natural brown, "tree-like" look of DuraPine Penta treated poles makes them an aesthetic favorite to consumers.

More Disposal Options - From recycling to energy recovery, DuraPine Penta treated poles can be disposed of in a multitude of ways depending upon state law and proper permitting.
